

Lantern Product Universe Atlas

Generated: 2026-05-26.

Purpose: compress every product we have, and every product we can make next, into one knowledge-to-cash atlas.

Thesis

Lantern OS can grow toward "all knowledge" by compression, not hoarding. The system should not try to dump the internet into a folder. It should turn verified sources, local artifacts, public-domain/commons media, scientific constants, creative systems, and lived needs into small products that teach, help, or sell.

Knowledge Compression Ladder

Step	Name	Meaning	Product Output
1	Observe	capture local files, web sources, user needs, repo state	intake log
2	Cite	attach source URLs, paths, dates, hashes	evidence table
3	Chunk	split into useful claims and assets	RAG chunks
4	Hash	preserve identity and provenance	SHA manifest
5	Embed	make retrievable by meaning	vector index
6	Relate	map concepts across domains	knowledge graph
7	Simulate	test claims against scenarios	world model
8	Teach	convert to age/context-appropriate explanations	packet/course
9	Build	turn into tool, PDF, gallery, checklist, or service	product
10	Sell	offer manual paid pilot first	invoice/call
11	Update	poll web/local changes and revise confidence	Bayesian ledger
12	Repeat	run Clean Storm sprint again	next product

Source Anchors

Domain	Anchor Source	Use
AI / SMB	U.S. Census BTOS and U.S. Chamber small-business AI reports	validate AI cleanup/training demand
Homeschool / K-12	Pew, Johns Hopkins, EdChoice	validate family learning and tutoring-adjacent packets
Constants / Planck	NIST SI constants	ground physics learning packets
Quarks / particles	Particle Data Group	ground particle/standard-model learning packets
Hubble / cosmos	NASA Hubble pages	ground astronomy/cosmos packets
D&D-like play	Creative Commons SRD only, plus original systems	inspire tabletop learning without copying protected IP
Commons media	Internet Archive / Wayback metadata	public-domain/CC/OSS intake only

Product Families

Product Family	What We Have	What We Can Make	First Buyer
COMET LEAP reports	master PDFs, confidence report, truth report	founder report pack	founder/builder
Local RAG cleanup	flat dollhouse file, skills, copied assets	repo/PDF-to-RAG sprint	builder/consultant
School art/math packet	Gage 20-art print PDF	tesseract/math/art packets	parent/teacher
AI setup/training	Lantern skills, Windows surfaces, Ollama observed	local AI cleanup session	SMB owner
Physics/cosmos learning	Planck/Hubble/quark source anchors	black-and-white science art cards	student/family
Tabletop learning	original game/game-maker repos plus CC SRD boundary	math/story quest packets	family/classroom
Commons archive	Archive batch script	public-domain music/movie/game index	educator/creator
Dual boot / local OS	readiness scripts and rollback docs	planning packet/session	local operator
Shareholder packet	front page, repo index, skills	investor/operator update	stakeholder

11-Day Cash Compression

Start with products that are already close enough to sell:

1. Founder report pack.
2. RAG cleanup sprint.
3. Gage-style school art/math packet.
4. Local AI setup/training.
5. Commons media index for educators/creators.

Do not wait for a complete universal model. Sell a small useful compression, deliver it, then absorb the lesson back into the world model.

Boundary Rules

- All-knowledge direction is allowed; all-knowledge claim is not.
- Use public-domain, Creative Commons, official, or properly licensed sources.
- Do not copy protected D&D text beyond licensed SRD material.
- Do not bulk-download Archive/Wayback media without rights and storage review.
- Keep physical OS installs and phone boot claims held until verified.

One Sentence

Lantern OS is a compression engine: it turns world knowledge into evidence, evidence into teaching, teaching into products, products into cash, and cash back into better local intelligence.
